

## Lap Band Profile

### Lap Band Profile

The purpose of the Lap Band Procedure is to adjust the size of an individual's stomach so that they receive an earlier sensation of fullness while consuming a meal, therefore resulting in weight loss. The goal of weight loss after an individual has had the Lap Band Procedure is generally one to three pounds each week.

The Lap Band Procedure has not only brought a better look on the outside for many individuals who viewed themselves with lower self-confidence in many cases, but it has also bettered the health of many individuals.

Individuals fighting their weight often discover themselves in a battle with other health-related issues.

When people are overweight or obese, they may also be in line unfortunately for sleep apnea, hypertension, high blood pressure, Type 2 diabetes and other medical problems that can have a very grave impact on their lives.
